

## Encryption Export Compliance Statement (EAR)

App Name: Strawberry  
Bundle ID: com.dryark.strawberry  
Version: 0.0.0  
Developer: Dry Ark LLC  
Date: 2026-01-22  
Contact: support@example.com

### Statement

-----  
This app uses encryption only for standard network communications security (for example, TLS/HTTPS connections to web services).

The app does not implement proprietary or non-standard encryption algorithms, and it does not ship its own cryptographic library in place of Apple's operating system encryption.

The app uses only encryption provided by Apple's operating system (e.g., Apple-provided TLS stacks accessed through system frameworks used by the app and its dependencies).

The app is not a VPN client/server, does not provide end-to-end encrypted messaging, and does not provide user-controlled key management or custom cryptographic functionality beyond standard transport security.

Accordingly, the app's use of encryption is believed to qualify as exempt under U.S. export regulations for mass-market software using standard OS-provided encryption.
